waterless suppression
-  Continuous environmental monitoring
(temperature, humidity and
air quality)
-  Redundant backup generators
and UPS systems
-  Redundant cooling

THE PREMIUM AFRICAN ALTERNATIVE TO ODOO.SH

Why relocate Odoo?

Most African businesses still host their data outside the continent, thus increasing loading times locally and weakening their digital sovereignty.

Odoo Cloud lets you reduce this latency, while strengthening your digital sovereignty.

Faster loading

Enables your data and applications to load (websites, cloud, ERP...) up to 4–5x* faster for your local customers and staff

* Compared to hosting in Europe or the US

Strengthen your digital sovereignty

Your main data stays in the country where you operate and you also benefit from the GDPR protection of our French company

THE PREMIUM AFRICAN ALTERNATIVE TO ODOO.SH

Hosted locally, backed up outside the country

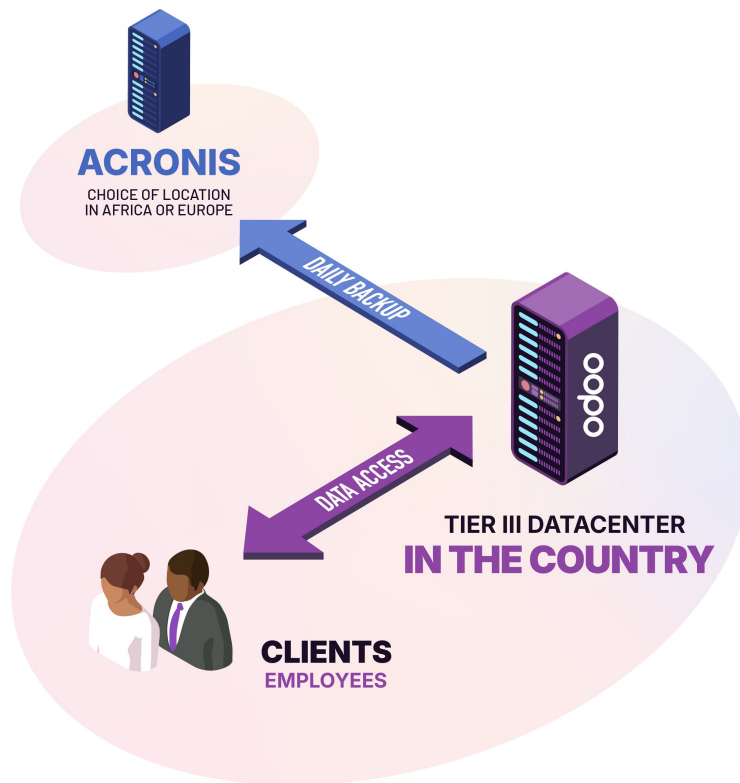

Your Odoo instances are **hosted in a Tier III datacenter in your country**, as close as possible to your users, for optimal performance and a smooth experience.

And because zero risk does not exist, **your data is backed up outside the country** for added security, in Africa or in Europe, according to your choice.

A disaster recovery plan is available as an option

Monitoring highly praised by our customers

David Lapierre

« I recently used Hodi and was impressed by the quality of their customer service. The team is available, responsive, and most importantly, they keep us informed as soon as an issue arises."

Najaah Malherbe

« Friendly contact, responsive and top-notch service both at ordering and at setup - in my case with email configuration issues. Highly recommended +++"

Julien Imache

« The service and quality are truly there, nothing to complain about. The team is responsive, and the infrastructure is stable and high-performing.»

Sandra Borrego

« I am very happy with Hodi's service. Every time I had a question, someone explained it to me very clearly and with a lot of patience! Thank you Julien !"

Excellent - 4.8
